

Ascension and Climate Change

As the Ascension process unfolds, so the whole Galaxy is warming up. This is a natural process brought about by the inflowing spiritual power that is affecting everything.

So, we can expect planet Earth to warm up over a number of years. However, this is not really negative. It is just a question of us adjusting to the warming as it occurs.

It is true that it is affecting some areas and some animals negatively at the moment but it will all balance itself out.

Governments are jumping on the bandwagon and squeezing money out of people, blaming the warming on us.

But it is just a natural effect of the Ascension process.
