

Resonance Frequency of any Spot

Q: How do they know the resonance frequency of any spot in the universe or galaxy? No way there is a book having all frequencies! How do they know it then?

A: I am not sure that I can answer this but I will tell you what I know.

God is pure light - star light.

Light is vibration, so God is vibration.

God created everything and put the totality of himself in everything.

So you are God pretending to be you. I am God pretending to be me.

Everything is God pretending to be whatever it is that God created.

Space is a creation of God as is our galaxy and all the planets.

I repeat, everything is made of vibration.

However, to give everything a sense of independence, God gave everything a slightly different vibration.

You vibrate slightly differently to me.

So, every spot vibrates slightly differently to the spot next to it.

Now, how aliens calculate those frequencies, I have no idea.

However, everything is stored in the Akashic records so I suppose that, if one could contact the Akashic record, it would be possible to find out the frequency of any spot anywhere.

But I can't say for sure that this is what is happening.

Thanks,

Bob
