

Traveling Faster Than The Speed Of Light

Question:

Would traveling faster than the speed of light result in time travel?

Answer:

While it is possible to travel faster than the speed of light, it would not result in time travel.

The only way to experience time travel is to contact the life of someone, either past or future via the akashic record. If one is able to do this, one can see life through the experiences of a person either in the past or the future.

Every moment of every person's life is recorded in the akashic record. Thus, if one can link to the file of a person in the akashic record, it is possible to watch the life of that person rather as if one were watching a film. This can be a person in the past or the future.
